Computer Hardware Basics – Student Notes

O-Level introductory notes

Computer hardware refers to the physical parts of a computer that can be seen and touched.

Input devices: Keyboard, mouse, scanner and microphone. They enter data into a computer.

Processing devices: The central processing unit (CPU) processes instructions and data.

Output devices: Monitor, printer and speakers. They present processed information.

Storage devices: Hard disk, solid-state drive, memory card and USB flash drive. They retain data for later use.

Motherboard: The main circuit board that connects major computer components.

Learning reminder: Use this sample handout alongside the teacher's instructions and the approved school curriculum.
